Version 2020.3.1	6
Service description:	9

This document contains a description on how to use the Public Message Type API, which can be used to retrieve a list of available Message Types used in BIV.

Request

The service is a REST service and can be reached through the following url:

`https://<biv-host>/filers-information/messagetypes-details`

Here <biv-host> needs to be replaced by the host applicable for the BIV environment to be used.

To make a correct call to this url a header property is required in the GET request:

Key	Value	Notes
Accept	application/json;api-version=<version>	Replace <version> with the actual version to be used. For example: application/json;api-version=2020.3.1

Response

The service returns its results in a JSON format. the response can be subject to change for this reason provide a version number.

Version 2020.3.0

The attachment information for each message type is returned with the minimum and maximum attachments per data type.

```
